Summary

Software Developer with a Computer Science degree and hands-on experience building web applications using HTML, CSS, JavaScript, Java, and SQL. Experienced working in professional environments delivering frontend solutions for enterprise and government-facing applications, with a growing focus on Java backend development using Spring Boot and REST APIs. AWS Cloud Practitioner certified, with a strong foundation in object-oriented programming, clean code principles, and agile delivery. Eager to contribute to real-world projects and grow across the full stack alongside experienced development teams.

Skills

Software Foundations	Object-Oriented Programming, Data Structures & Algorithms, Basic System Design, Writing clean, maintainable code
Web & Programming	HTML5, CSS3, TailwindCSS, JavaScript, React, SQL, MySQL, Java, Spring Boot, REST APIs
Development Practices	Git & version control, Agile development, Debugging & problem solving

Experience

Software Developer | OpenText

12.2024 – 03.2026

- Worked within a secure, enterprise environment supporting government-facing applications, adhering to strict security and compliance requirements.
- Developed and maintained custom front-end widgets using JavaScript, HTML, and CSS to meet specific customer requirements.
- Contributed to UI enhancements and feature updates used directly by end customers.
- Completed an initial full-stack learning phase, gaining exposure to wider application architecture, data flow, and development processes.
- Collaborated in team-based projects using Agile practices, including stand-ups and sprint-style delivery.
- Collaborated with senior developers to understand existing codebases and follow established development standards.

Software Engineering Bootcamp | Skills City

09.2024 – 12.2024

- Built responsive web applications using HTML, CSS, JavaScript, and React, focusing on clean UI and maintainable code.
- Strengthened core software engineering fundamentals, including problem-solving, debugging, and version control.
- Worked with SQL databases to store, query, and update application data.
- Delivered a real-world project based on client requirements, balancing functionality, usability, and deadlines.

Independent Developer | Java Plugins

06.2023 – Present

- Designed and developed custom Java-based plugins based on direct client requirements.
- Worked with an existing API (RuneLite) to extend functionality and integrate new features.
- Applied object-oriented design principles to build modular, maintainable code.
- Communicated with clients to gather requirements, diagnose issues, and deliver updates.
- Maintained and iterated on projects based on feedback, resulting in repeat requests and referrals.

Education & Certifications

BSc Computer Science | [Liverpool John Moores University](#)

09.2019 – 06.2022

- Algorithm Design, Discrete Mathematics, Data Modelling, Compiler Design, Data Analytics.

AWS Cloud Practitioner | [Amazon Web Services](#)

2025

- Foundational certification covering cloud concepts, AWS core services, security, and cloud architecture.

Projects

Personal Portfolio Site

Designed and developed a responsive personal portfolio website using HTML, TailwindCSS, JavaScript and React to showcase projects and technical skills. Focuses on clean layout, accessibility, and modern web design practices.

Unity Radio Website

Worked as part of a small team to design and build a full-stack website for Unity Radio, a real-world client project delivered during a software engineering bootcamp. The frontend was built using React and the backend powered by Java Spring Boot, following Agile principles with regular stand-ups and iterative delivery to meet client requirements within a fixed timeframe.

E-Auction System

Worked as part of a team to design and implement an object-oriented auction system using Java, following Agile principles with regular SCRUM meetings and iterative development.
